available via FP10 route		
--------------------------	--	--

Practice support staff:

- Please update the EMIS formulary in practices.
- If you have installed 'pop ups'/protocols please amend as appropriate.
- Please ensure practice nurses / HCAs / staff processing requests for dressings / involved with wound care, have seen the new wound formulary / amendments / know how to access on line (link below)
- Please note: GPs are required to prescribe specialist formulary items if requested / advised by TVN for nursing home patients / practice nurses as per patient treatment plans (please refer to the back of the wound formulary for specialist formulary products). District nurses are now able to obtain specialist formulary products via the Formeo direct order system (changed from ONPOS) and should not be asking GPs to prescribe for community patients (unless a nursing home patient or a patient having wounds dressed by practice nurse as per patient treatment plan)
- For non - specialist standard formulary dressings district nurses should not be requesting GPs to prescribe as they can obtain via the Formeo direct supply system.
- Any non - formulary requests for GPs to prescribe should be discussed with TVN: Email TVN@somersetFT.nhs.uk The person making the non – formulary request should also complete an exception reporting form, found at the back of the wound formulary and submit to Tissue Viability Manager TVN@somersetFT.nhs.uk
